DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 7 recites the limitation "the plurality of cooling-gas introducing pipes.." in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Art Unit: 3749

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 5, 7 and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Gat (6,727,474). Gat discloses a thermal processing unit (10) for conducting a thermal process to a plurality of objects (14) in a tier like manner (Figure 1) in a processing container (12) made of metal (column 5, line 38-40) and includes a heating unit (36), a cooling gas introducing unit (18, 19) having a plurality of blowing holes formed in the pipe wall for blowing out the gas in a tangential direction and is inserted into the container in a vertical direction (height) with the blowing holes formed at suitable intervals in the vertical direction of the pipe, a circular space (within element 33) formed between the container and the plurality of objects to be processed and furthermore includes a processing container (16) which a coolant flows.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3749

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 6, 8, 9 and 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gat (6,727,474) and alternatively over Gat in view of Kato (6,403,927). Gat discloses the applicants primary inventive concept as stated above, but with regard to claim 6, Gat does not particularly teach a plurality of cooling-gas introducing pipes. It would have been obvious to one having ordinary skill in the art at the time the invention was made to increase the amount of cooling-gas introducing pipes since increasing the amount of essential working parts does not appear to solve any stated problem in a new or unexpected way or is for any particular purpose which would be unobvious to one having ordinary skill in the art. With regard to claims 9 and 11. Gat does not particularly disclose the volume of the structure nor the rate at which gas is introduced to achieve the cooling as specified in claim 11, however it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the flow rate of the gas flow as well as the volume of the container to meet the desired need, since it has been held that where the general conditions of a claim are disclosed in prior art, discovering the optimum or workable range involves only routine skill in the art. With regard to claims 8, Gat discloses the applicants primary inventive concept, but does not describe the blowing holes as having a porous member. The applicant discloses in the specification (See page 11, line 9-17) that the function of the porous member is to reduce the flow rate of the cooling gas blown out from the holes. While Gat does not particularly teach this feature, Kato teaches the use of valves (16)

Art Unit: 3749

connected to individual air flow channels for the purpose of controlling the flow rate of cooling gas. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to incorporate the valves of Kato into the invention of Gat (specifically the cooling gas introducing unit 18, 19) for the purpose of controlling the flow therethrough since the valves of Kato serves as a functional equivalent to the applicants "porous member".

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gregory A. Wilson whose telephone number is (571)272-4882. The examiner can normally be reached on 7 am - 4:30 pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kenneth Rinehart can be reached on (571) 272-4881. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
